

II Year B. Tech-II Semester Industry Oriented Project Summary Sheet

Project Title:		AUTOMATIC EMAIL REPLY SYSTEM			
Project Code:	23CIIP1E18	Batch Size:	3	Batch:	2023-27
Domain / Area:	Interactive applications		SDG Mapping	Decent work and economic growth	
Abstract:	Automatic email reply system allows for more efficient and timely responses to your inquiries, ensuring you receive the information and support you need when you need it. Using imaplib and smtplib libraries we are developing this project. The major drawback for this system is to only replies to standard message for every mail. The proposed automatic email reply system will efficiently handle incoming emails by utilizing predefined rules and the system will continuously monitor the designated inbox and, upon receiving an email, will apply a standard reply.				
Technical (S/w & H/w) Specifications			Module(s) Specifications		
S/w Requirements: Python using imaplib and smtplib libraries Email Client/service: Integration with email platforms like Gmail, Outlook. Operating System: Windows /Linux/MacOS Hardware Requirements: Server: A dedicated server for processing email requests. RAM: 8GB Storage: Sufficient storage			• IMAP Module • SMTP module • Email parsing • Text parsing and formatting • Date and time management • Automation and scheduling		
Architecture Diagram			Methodology		
			• Define the requirements • Set up your environment • Develop the system • Automation and scheduling • Logging and debugging • Test the system • Deploy • Maintain and improve		
Existing System			Proposed System		
1. We can reply message according to scheduled time. 2. Sender doesn't understand that message is sent or not. 3.			1. Replying messages are at faster rate. 2. Sender can understand that message is sent successfully. 3. Libraries used for developing this project are smtplib and imaplib.
